Products stay fresher longer

HB-101 reduces the need for agri-chemicals and pesticides

Production can increase up to 30%

Has powerful deodorising properties

Suppresses pathogens

Increases fruit size and taste in strawberries, grapes and apples

Produces larger brighter flowers with strong stems

Larger and more luscious vegetables especially in Brassicas and Beans

Varying concentrations used for different applications

HB-101 is an extraordinary product produced in Japan to increase all types of plant health and production. This amazing product is used at extremely low strength but the results of increased production or overall quality of produce is great. The product is a fully natural product made from a combination of plant saps and secondary metabolites which work with the plant to grow faster and increase health.

HB-101 can be applied in many ways. For soil conditioning before planting the product is sprayed onto the ground. This helps prepare the soil for the plant much in the same way micro-organisms do. Seeds of the crop can be soaked in a specific concentration of **HB-101** to promote germination. **HB-101** is then sprayed on the plant foliage at designated times throughout growth. The results are remarkable and both commercial and home growers will notice an increase in production as well as plant health and quality. For more detailed information on specific crop uses and concentrations please contact us.
