

CANGro™ Initial Plus

CANGro™ Initial Plus is a consistent stable media created using a complex combination of composted bark fines and fibre mulch with a particle size of approximately 0 – 12mm. The addition of the fibre mulch during the composting process produces a media which has a wide range of end uses.

Characteristics

Produced from entirely organic renewable resources

High quality consistent media

Created using a combination of composted bark fines and wood fibre

Used as a base media for growing bedding plants, general pot plants and more mature plant types

High Air Filled Porosity (AFP) but retains good water holding ability

pH adjusted media available for specialised plant types

Is a base component of other CANGro™ mixes

Contains natural beneficial organisms

Nitrogen stabilised

No fertilisers are added unless specified by the grower

Produced using strict quality control standards

Chemical and physical analysis carried out on each batch

Technical:

Composition: Composted bark fines and aged bark fibre

Common use: General propagation, potting mix, and mix component

Plants grown: Larger seeds, Bedding plants, tomatoes, vegetables, perennials, flowers and small shrubs

Analysis:

EC (mS/cm) <0.3

Particle size 0 – 12mm

Air Filled Porosity (AFP) 26%

Water Holding Capacity 62%

CANGro™ Initial Plus is one of the coarse grades of media in our range. It is used where coarser growing media is required in applications such as general potting for larger and mature plants. The higher Air Filled Porosity (AFP) provides good aeration while retaining good Water Holding Capacity (WHC). pH adjusted media is available for plants that require an acid or further alkaline material. No fertilisers are added to the media but specialised fertiliser regimes can be added to the product on request.

CANGro™ Initial Plus is a main component of CANGro™ Versatile and CANGro™ Superior which are mixed with different grades of coir to provide added structure and water holding ability. The added coir in these two mixes overcomes rewetting problems often associated with bark products. As with all other CANGro™ products each batch is chemically and biologically tested before sending to the grower.
