

CANGro™ Superior

CANGro™ Superior is a coarse blend of CANGro™ Initial Plus and Profit Coir. The combination of the coarse bark and coarse coconut fibre produces a media tailored for growing larger more mature plants that require good amounts of air and room to grow.

Characteristics

Produced from entirely organic renewable resources

High quality and consistent media

Created using a combination of CANGro™ Initial Plus and Profit Coir

Used as a media for growing mature type plants including pot plants, shrubs, tub plants and trees

High Air Filled Porosity (AFP) is high but retains good water holding ability

pH adjusted media available for specialised plant types

Added Profit Coir increases water holding and rewetting ability of the media

Contains natural beneficial organisms

Nitrogen stabilised

No fertilisers are added unless specified by the grower

Produced using strict quality control standards

Chemical and physical analysis carried out on each batch

Technical:

Composition: Coarse composted bark fines + Profit Coir

Common use: Potting/ Tub mix

Plants grown: Mature plants/ perennials, trees and shrubs

Analysis:

pH 5.8 – 6.5 unadjusted

EC (mS/cm) 0.4

Particle size 0 – 12mm

Air Filled Porosity 26%

Water Holding Capacity 68%

CANGro™ Superior is a very good mix designed for plants requiring a higher amount of air. The addition of Profit Coir to the coarse composted bark provides the media with an added amount of coarseness but also increasing the water holding ability of the media. Profit Coir is a crushed coir chip which is able to hold high amounts of water while retaining its structure. The end product is an excellent stable media used for growing larger mature plants that has a good water holding and rewetting ability. This type of media is also commonly used for growing plants such as palms, that require a porous media.

No fertilisers are added to the media unless specified by the grower. There is a pH adjusted version available for plants that require a different media pH. If a coarser media is further required, extra bark fibre can be added to the media for extra air. As with other products in the CANGro™ range, each product batch is chemically and biologically tested prior to dispatch.
