

CANGro™ Versatile

CANGro™ Versatile is a high quality blend of coarse composted bark CANGro™ Initial Plus and Classic Coir. This media is one step up from CANGro™ Vigour in coarseness and is designed for general potting of bedding and pot plants. The increased Air Filled Porosity (AFP) along with the addition of coir creates a media which is, as the name suggests, a versatile media for all plant types.

Characteristics

Produced from entirely organic renewable resources

High quality and consistent product

A combination of coarse composted bark and Classic Coir

Used as an all purpose general potting media

Added coir increases water holding and rewetting ability of the media

Good Air Filled Porosity (AFP)

pH adjusted media available

Contains natural beneficial organisms

Encourages excellent root growth

No fertilisers are added but these can be added on request

Produced using strict quality control standards

Chemical and physical analysis carried out on each batch

Technical:

Composition: Coarse composted bark fines + Classic Coir

Common use: Potting mix/ Bedmix

Plants grown: All plant types from seedlings to small shrubs

Analysis:

pH 5.8 – 6.5 unadjusted

EC (mS/cm) 0.4

Particle size 0 – 12mm plus fibres

Air Filled Porosity (AFP) 24%

Water Holding Capacity (WHC) 65%

CANGro™ Versatile is one of the most commonly used media. It is designed for general all purpose potting such as bedding plants and general pot plants. The combination of Classic Coir with the coarse bark material increases the Water Holding Capacity (WHC) of the media while decreasing the coarseness. This enables the material to be used for all types of applications from seedlings through to small shrubs. Slow release fertiliser can be added to the media if required and a pH adjusted version is available.

As with all products in the CANGro™ range, every batch of product is chemically and physically tested before dispatch to the customer.
