

# P.O.C.<sup>™</sup> Prime Organic Conditioner

Soil structure is important for plant growth. Many different types of soils need replenishing with organic matter and nutrients before plants can grow well in that area. To help improve soil structure, Pacific Wide (NZ) Ltd has developed a rich soil conditioner called P.O.C.<sup>™</sup> designed to add soil organic matter and nutrients back into the soil.

## Characteristics

Made from a rich source of organic compost, aged fibre mulch and bark fines

Adds organic matter and nutrients back into the soil

Increases soil pH

Increases soil micro-organism and worm activity

Improves soil structure by forming soil aggregates and humus

Helps improve water holding ability in the soil

Easy to use as it is simply tilled into the ground

Excellent for use in home gardens or redeveloped areas

Improves the growth of plants in general by aerating the soil, increasing water availability and nutrient status

An important product to improve the structure of clay soils.

### Technical notes:

pH 6.0-6.5

EC 2-3 mS/cm

Contains high amounts of Nitrogen, Phosphorus, Potassium, Calcium and Magnesium

P.O.C.<sup>™</sup> is a stable blend of 3 rich organic components manufactured from renewable resources. The material is designed as a specialised soil conditioner for applying to soils and redevelopment areas where replenishment of nutrients and organic matter is much needed. Bark aged fibre mulch and the bark fines help replace organic matter back in to the soil for Humus production. Organic compost is rich in nutrients and helps provide the soil with nutrients such as Nitrogen and Phosphorus. P.O.C.<sup>™</sup> is easy to use as it is simply tilled into the ground. The material encourages worm and microbial activity in the soil while increasing soil pH. This eventually leads to a highly fertile soil capable of growing all types of plants. P.O.C.<sup>™</sup> is an important product for improving soil structure and quality, especially in clay soils, and is recommended for use in areas such as home gardens through to barren areas being redeveloped.
