

COIR POTS

Coir Pots are 100% environmentally friendly and biodegradable alternative to plastic pots. They are produced using coconut husk fibres which are held together with a natural rubber adhesive. **Coir Pots** are porous but retain a rigid structure excellent for growing plants that will be transplanted into the soil.

Characteristics

Produced from entirely organic renewable resources

Produced under the Dutch RHP standards for growing media

Easy to use and save time; just plant the Coir Pot into the soil

No need to remove the plant from the Coir Pot reducing plant shock

No leftover plastic containers to put in our landfills, greatly reducing the amount of plastic used

The coir material allows air and water to move through the Coir Pot providing good aeration to the roots

Air roots can be trimmed until ready to plant into the soil

Excellent cultivation results

Better root formation than plastic pots

No root twirling or bound roots, no need to manipulate root ball before planting

More water retention – this saves time and precious water use

Faster settling after planting

Strong coir structure means pots retain their actual shape

Available in a range of sizes in both square and circular

Aesthetically pleasing to the eye

Coloured Coir Pots available – see our range

Sizes available range from 6 x 5.5cm through to 16 x 12 cm round pots. Square pots are also available and there are now a range of coloured pots available

The Coir Pot is a very versatile alternative to the plastic or peat pot. The pot is designed to propagate and grow plants to the transplant stage where the pot can simply be planted into the soil along with the plant. **Coir Pots** are fully biodegradable and eventually break down in the soil. The pots themselves are very porous which allows the roots to easily penetrate the sides of the pot reducing root restrictions. The formation of the pots using a natural rubber adhesive means the structure remains rigid therefore retaining its shape during plant growth.

Moisture is easily taken up by the pot for the plant and it has been shown that root growth within the Coir Pot is superior to that of a plastic pot. The range of sizes and colours available make the pots viable for both commercial and home gardener use.
