

# CRUSH COIR

**Crush Coir** is a similar product to Profit Coir however it is not treated by buffering with Calcium and Magnesium. **Crush Coir** is manufactured using the whole coconut which is cut and crushed to form a product which is coarse in nature but not as coarse as coir chips. Unlike Profit Coir, **Crush Coir** is not buffered with Calcium and Magnesium therefore can be used for applications which do not require specialised buffering.

## Characteristics

- Produced from entirely organic renewable resources
- High quality consistent product
- Produced from cut and crushed coconut husk
- Produced under the Dutch RHP standards for growing media
- Used for applications where buffering with Calcium and Magnesium is not required
- Promotes excellent root growth
- Increases water use efficiency
- Superior air capacity
- Excellent additive to other growing media substrates; increases water holding and air porosity of a media
- Easy to re-hydrate and steer pH, EC and moisture contents
- A very generative medium
- Very stable structure
- A variety of product sizes available

### Technical:

- pH 5.5 – 6.0
- EC (mS/cm) 1.0
- Air / Water Ratio at 7cm 30%/ 70%

### Pack sizes:

- 4.5 kg bales (63L reconstituted)
- A variety of slab sizes made to measure with pre cut drain and planting holes
- 650gm Briquettes

**Crush Coir** is a very good product for growing plants where EC and salt accumulation is less of a problem. As this material is not buffered it is better suited for applications, including mixing with other media types such as bark to create a media mix. Adding **Crush Coir** to other media substrates improves the media by increasing the water holding ability, increasing Air Filled Porosity (AFP) and improving media structure.

**Crush Coir** is easily reconstituted from bales or slabs and is used for growing a variety of vegetables and ornamentals.
