

GRO CUBE

To accompany the increasingly popular coir slab, the **Gro Cube** has been designed to propagate and start young plants out before they are placed onto the slab. The **Gro Cube** is a simple cube design made from Classic Coir which is buffered with Calcium and Magnesium, then encased in a natural biodegradable rubber. The final product is an environmentally friendly product that will break down reducing dumping problems while improving plant growth.

Characteristics

Produced from entirely organic renewable resources

Specially designed cube for propagating seedlings and young plants

Produced from Classic Coir the **Gro Cube**, which is buffered with Calcium and Magnesium, is then coated in a natural, biodegradable rubber

Rubber casing is permeable to roots and allows the media to stretch during root growth

Rubber breaks down after 8-9 months

Seed hole present for seed propagation

Excellent root growth shown

Easy absorption of cubes by water, fertigation is easy

No rewetting problems

Excellent for vegetable seedlings which are to be planted onto slabs

Environmentally friendly and 100% biodegradable

Technical:

pH 5.5 – 6.0

EC (mS/cm) 1.0

Air/ Water Ratio 20%/ 80%

60gm cube available (90x90x50mm)

The **Gro Cube** is a perfect propagation cube to use in combination with coir slabs. The **Gro Cube** is designed for propagating seedlings to the stage where they can be placed onto a slab or Gro Pac. As the cube is created using Classic Coir, root growth is promoted and plants quickly grow to their transplant stage.

The **Gro Cube** is unique as it is 100% biodegradable due to its natural rubber casing. This casing will eventually break down after 8-9 months in use. Roots can also penetrate the rubber reducing the possibility of bound roots. Each cube also has holes on the bottom side of the cube to help direct roots downwards into the slab or Gro Pac. The **Gro Cube** was designed specifically in Holland and has shown to encourage and form strong root growth.
